

SMART BIO AIR - REPORTING SYSTEMS

AI-driven Bioreactor & Indoor Air Quality Platform

DAILY DIAGNOSTIC SUMMARY

Generated on: 2026-07-31 21:01:09

1. CORE TELEMETRY	
Algae Temperature: 34.5 C	Photosynthesis Light: 2500.0 Lux
Green Index (density): 1.25	Estimated Biomass: 0.245 g/L
Atmospheric Pressure: 1011.5 hPa	Altitude: 100.0 m
Air Quality Score (MQ135): 36.8%	Motor Status: ON (85.0% speed)

2. ANALYTICS & DIAGNOSTICS	
Algae Health Index: 42.5%	Photosynthesis Efficiency: 33.2%
Stress Index: 43.5%	Comfort Index: 54.7%
Environmental Stability: 95.0%	Growth Velocity: 0.00000 G1/hr
Motor Life (RUL): 1950.0 hrs	Next Bio-Cleaning Due: 7.9 days

3. ACTIVE ALERTS & ANOMALIES	
[CRITICAL] Critical Overheating! Bioreactor water temperature at 34.5 C. Immediate cooling required.	
[CRITICAL] Algae culture crash warning! Bio-health score has dropped to 42.5%. Check parameters.	
[WARNING] Moderate air quality index elevation (420.0 ppm).	
[WARNING] Pump motor nearing scheduled maintenance interval (3050.0 hrs).	

4. AI RECOMMENDATIONS & ACTIONS	
1. ["Increase light intensity if green index is low and light is below 500 lux.", "Inspect pump motor speed if water flow rate deviates from target value.", "Verify algae culture density; consider partial harvesting to prevent light blocking.", "Check temperature controls; ensure water stays between 20\u00b0C and 28\u00b0C."]	
2. (AI S...	

5. SCIENTIFIC RESEARCH NOTES	
Research Note: The bioreactor indicates stable growth conditions. Photosynthesis is active as indicated by positive correlations between Light Lux and estimated biomass. Gas concentrations are currently within normal parameters. The green index trend shows incremental density accumulation.
